(54) Title: **MEDICAMENT APPLICATION DEVICE**

(57) Abstract: A medicament application device for using with a medicament container includes a plate (18) defining at least one hole (26) therethrough, a connector (20) extending from a bottom side of the plate to a proximal end, and a medicament applicator (22) detachably attached to a top side of the plate. The medicament applicator is made from a fluid permeable material. The proximal end of the connector is adapted for connecting to an opening of the medicament container. The connector defines an inner channel, which is in fluid communication with the opening of the container and the hole of the plate.
